DEMO DATA - OIL INDIA LIMITED | EASTERN REGION ASSET

DAILY DRILLING REPORT #42 (OPERATIONS SUMMARY)

=====

Well: Duliajan-NWIS-01 | Well ID: OIL-NWIS-ACT-001 | Field: Duliajan

Spud Date: 12-JAN-2025 | Target TD: 3400m | Current Depth: 2850m

Formation: Barail Group (Shale / Sandstone sequence)

DRILLING EVENT: STUCK PIPE at 2850m (Severity: HIGH)

Description: Differential sticking in Barail shale member. Drill string could not rotate or POOH.

Cause: High overbalance pressure against permeable sand lens with 45 minutes static time during directional survey.

Mitigation: Spotted 150 bbl diesel/glycol spotting pill. Applied 15t overpull with hydraulic jar activation sequence.

Outcome: String freed after 4.5 hours NPT. Circulated bottom-up clean before resuming rotary drilling.

NPT Hours: 4.5

DRILLING PARAMETERS AT EVENT:

WOB: 14 t | RPM: 60 | Torque: 22 kN.m | ROP: 4.2 m/hr

MW: 1.38 g/cc | SPP: 240 bar | Flow Rate: 2200 L/min

LESSONS LEARNED: Limit static time to under 15 minutes when drilling Barail shale intervals with overbalance.

BEST PRACTICE: Pre-mix 200L diesel spotting fluid prior to drilling lower Barail target section.
